Objective

Java Developer with hands-on experience in Servlets, JSP, JDBC, and MySQL, and a 4-month internship in application development. Built a full-stack web application with secure login, role-based access, and transaction-safe order processing. Seeking a Java Developer / Software Engineer role to grow and contribute to real-world projects.

Education

Bachelor of Technology, Computer Science & Engineering 2021 – 2025
DY Patil School of Engineering & Technology Ambi Pune, India
CGPA: 7.08

HSC 2021
Tripura Kanishtha Mahavidyalaya Latur, Indiaa
Percentage: 84.83%

SSC 2019
Shivaji High School Nanded, India
Percentage: 71.00%

Skills

Languages & Core: Core-Java, C, SQL, HTML, CSS, JavaScript
Frameworks & Libraries: Servlets, JSP, JSTL, JDBC, Spring Boot, Hibernate/JPA, JWT Authentication
Concepts: MVC Architecture, Transaction Management, Role-Based Access Control
Databases & Tools: MySQL, MySQL Workbench, Eclipse, VS Code, Git/GitHub, Maven, Apache Tomcat
Soft Skills: Problem-solving, Client Communication, Self-directed Learning, Team Collaboration

Experience

Application Development Intern May 2025 – Sep 2025 (4 Months)
NexaNova ProTech Shivajinagar, Pune, India

- Selected for a 4-month Application Development internship through technical interviews and discussions, gaining mentorship and exposure to current industry practices.
- Assisted in developing software applications according to client requirements, under the guidance of the project manager.
- Contributed to the design and implementation of new features, working closely with team members and subject matter experts.
- Researched and analyzed emerging technologies to support project requirements.
- Supported application maintenance by helping resolve client queries and fix reported errors.
- Delivered assigned tasks within deadlines, following company guidelines and attending team meetings and training sessions.

Projects

Online Shopping Cart System: Java EE Web Application (JSP, Servlets, JDBC, MySQL)

- Designed and built a full-stack e-commerce web application using Java Servlets, JSP/JSTL, and JDBC, following a layered MVC architecture (Controller → Service → DAO → View) with separate Customer and Admin roles.
- Implemented secure authentication with PBKDF2 salted password hashing, HttpSession management, and servlet filters for role-based access control; used PreparedStatements throughout to prevent SQL injection.
- Developed customer features: product catalog, cart with quantity controls and live item-count badge, wishlist, saved shipping addresses, checkout with validated card-payment simulation, order history, and order tracking.
- Built an admin panel for product CRUD (image URLs), user management, and an order status workflow (Placed → Shipped → Delivered / Cancelled) with validated state transitions.
- Used JDBC transactions (commit/rollback) so order creation, stock deduction, payment record, and cart clearing succeed or fail together; cancellations restore stock and mark the payment as refunded atomically.
- Normalized MySQL schema across 8 tables (users, products, cart, orders, order_items, payments, addresses, wishlist); stored only the last 4 card digits and never the CVV.
- Deployed on Apache Tomcat 10.1 (Jakarta EE / Servlet 6.0) and published the complete source code on GitHub.
